Technical Skills

Languages: C/C++, C#, JavaScript, Python, Java, Assembly

Technologies: ASP.NET Core, PostgreSQL, REST APIs, OpenAI API, Cloud Computing (Azure), Docker, Ansible

Practices & Tools: Agile Development, CI/CD (Azure DevOps), Git, GitHub

Work Experience

Chevron June 2024 – September 2024

Software Engineering Intern *Houston, Texas, United States*

- Built an **Ansible** based budget monitoring system integrated into the **Azure DevOps** CI/CD pipeline, proactively alerting stakeholders across **3** environments and saving an estimated **30** engineer-hours per week.
- Diagnosed and fixed build configuration errors across **3 Java Maven** modules, restoring automated **CI/CD** compilation and enabling automated security vulnerability scanning.
- Extended Ansible **automation** with new playbooks to provision Azure Storage Accounts and Key Vaults, standardizing secure credential and storage management across environments.

Chevron June 2023 – September 2023

Software Engineering Intern *Houston, Texas, United States*

- Collaborated with third-party vendor **Invenco** to integrate a self-service payment platform across **8,000** Chevron gas stations, supporting a system that processes over **$100 million** in transactions daily.
- Designed and implemented data validators in **C#** to ensure required fields were correctly populated in Generic Data Upload Reports, preventing invalid data from reaching downstream compliance and reporting systems.
- Used **Git** and **Azure DevOps** to deploy validator updates and maintain technical documentation for the reporting pipeline.

Personal Projects

StockFlow API | Demo | GitHub August 2026

- Built a full-stack warehouse inventory management API using **C#**, **ASP.NET Core**, and **PostgreSQL**, with JWT authentication, Dockerized deployment, and automated CI/CD, live in production on Railway.
- Integrated the **OpenAI API** to translate natural-language questions into a whitelisted set of structured queries, so the AI never generates SQL or touches the database directly, closing off prompt-injection risk.

GPU Image Processing Pipeline | Github June 2026

- Developed a CUDA-accelerated image processing pipeline in **C++** implementing Gaussian blur and Sobel edge detection, achieving up to 24x speedup over the CPU implementation via a 16x16 thread-block configuration.
- Profiled kernel execution separately from transfer overhead using **CUDA** events (598.8x kernel speedup for Sobel), and validated GPU output against CPU results for pixel-exact correctness.

Leadership

President — National Society of Black Engineers September 2025 – June 2026

University of California, Riverside

- Led 3 conferences and 20 events for NSBE members while overseeing Membership and Social Standing committees to improve engagement and retention.

Peer Mentor September 2024 – June 2026

UCR Bourns College of Engineering *Riverside, California, United States*

- Mentored 6 first year engineering students through personalized 1:1 support, workshops, and academic guidance.

Education

University of California, Riverside Graduated: June 2026

Bachelor of Science, Computer Science

- **Relevant Coursework:** Software Construction, Data Structures, Algorithms, Design and Architecture of Computer Systems, Discrete Structures, Probability and Statistics, Artificial Intelligence, Operating Systems
